## HUBER Solutions for Sewer Systems

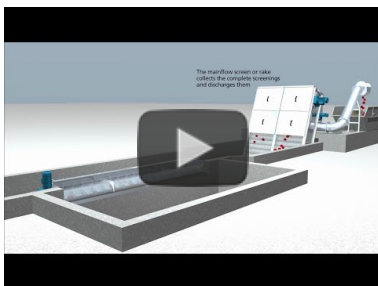

We have the suitable HUBER screen for any **pumping station**: our **HUBER Coarse Screen TrashMax®** offers protection even against biggest interfering substances while our robust **HUBER Multi-Rake Bar Screen RakeMax®** is especially suitable to be used in deep channels and with high peak solids loads. For smaller pumping stations and manholes with limited space we have developed our vertical **HUBER Pumping Stations Screen ROTAMAT® RoK4** which combines vertical transport, dewatering and compaction of the removed screenings in one unit.

Our product range also includes solutions for **water screening in overflow structures (CSO)**: Our **HUBER Storm Screen ROTAMAT® RoK1** is installed on the rear side of overflow weirs, while our **HUBER Storm Screen ROTAMAT® RoK2** as inverted upward flow screen is installed on their front. Both screens are provided with semi-circular perforated plates that are self-cleaning with screws and brushes. We also provide measuring weirs for discharge measurement / flow monitoring and special flow restrictors and gates for discharge control.

As **equipment for manholes and pits** we supply various stainless steel components, such as manhole covers, ladders, step irons, guardrails, access aids and complete pre-fabricated manholes.

Sewers offer also the possibility to install HUBER solutions that enable **heating and cooling of buildings with wastewater**.
